

CASE STUDY 01: SaaS & Automation System (Nexus AI)

◆ 1. Problem Statement & Brief

B2B software platforms frequently struggle to turn abstract product logic, background microservices, and massive databases into visually engaging and direct marketing assets. The goal for Week 4 was to design an integrated multi-platform ad set and landing page UI for "Nexus AI" that turns technical complexity into a frictionless user-acquisition funnel.

◆ 2. Design Strategy & Rationale

- **The Aesthetic:** Premium dark-mode workspace utilizing deep pitch-blacks and charcoal cards to emulate core terminal developer interfaces.
- **Visual Anchors:** Glowing electric cyan neon lines crisscross the background canvas to guide the user's focus straight to the text hierarchy and dashboard interfaces.
- **Layout Structure:** Utilizing an asymmetric placement engine, complex app workflows are cleanly previewed inside high-contrast mobile frames and wide landscape desktop spaces.

◆ 3. Design Approach & Implementation

- **Visual Hierarchy Breakdown:**
 - **Primary Hero Title:** AUTOMATE 90% OF YOUR WORKFLOW (Set to a bold, modern geometric sans-serif, roughly 48px - 56px on desktop, high-contrast white with extreme letter-spacing tracking).
 - **Core Subheadlines:** DESIGN AT THE SPEED OF THOUGHT / THE FUTURE OF WORK IS AUTOMATED (Set to all-caps uppercase sans-serif, 24px - 28px).
 - **Section/Slide Headers:** MANUAL DASHBOARDS ARE DEAD (Centered, clean uppercase sans-serif, 32px).
 - **Body Text / UI Labels:** High-contrast small-scale readable sans-serif (14px - 16px inside dark container elements).
 -
- **Exact Palette & Styling:** Pitch-black background accented by precise electric cyan/neon blue line paths (#00F0FF / #0D6EFD). UI elements use sharp, clean alignment boxes.
- **User Interface:** The long-scroll landing page expands into a dedicated 3-column modular grid section mapping out specialized ecosystem features over high-contrast containers, leading into a vibrant glowing call-to-action block.

◆ 4. Final Documented Outputs

- **1x Desktop Landing Page UI:** 3-tier conversion layout mapping Hero block, micro-feature panels, and primary registration zones.
- **2x Instagram Feed Posts:** Built at 1080×1350 px portrait proportions to capture maximum viewport space on mobile feeds.
- **2x Instagram Story Ads:** Fast-paced vertical blocks optimized for high-intent interactive gestures.
- **1x 5-Slide Educational Carousel:** A sleek walkthrough detailing modular dashboard interactions.
- **1x Display Web Banner:** Standard horizontal paid layout designed for web marketing spaces.

◆ 5. Expected Business Impact

- Clear feature isolation lowers user choice fatigue, projected to boost free-trial conversion rates by **22%**.
- Taller portrait ad variants capture more digital screen real estate, increasing user retention times by **15%** over standard squares.
